## **The OCA Mission Statement...**

The OCA is an organization dedicated to the advancement and dissemination of information relating to all aspects of the biology of cichlids and related aquatic life. Our purpose is to promote the interest, keeping, study, breeding, and the educational exhibition of Cichlids. Additionally, the exchange of ideas, meeting new people, and distribution of information concerning Cichlids is of primary interest.

### There are many ways to get involved with the club!

Attend Meetings Contribute to the Buckeye Bulletin Participate in the monthly Bowl Show Volunteer to "run" at an auction Persuade non-members to attend a meeting Attend the Extravaganza Participate in the Breeder Awards Program Enter fish into an auction Join the Board – elections are held in December Like/Share an OCA Facebook post Post a thread on the OCA Forum Visit Ohiocichlid.com

Get involved in all things OCA!

# January 2016 Meeting will be held in Medina

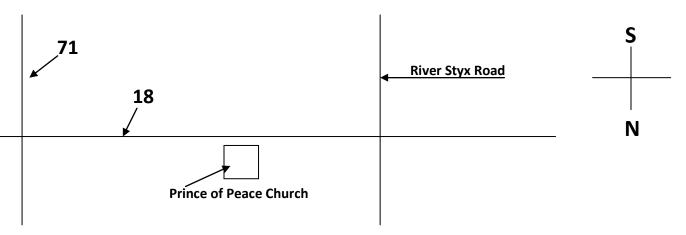

We will be permanently moving our meetings to another location as of January 1<sup>st</sup>, 2016. We can't get into our new place until February, so the Medina club has offered to help us out.

We will have a shared meeting with the Medina club at their location, The Prince of Peace Church. All BAP's, Auctions, Bowl Show, etc, will be the same as they are for all of our meetings.

It's going to be a cool meeting because the Medina club members have some excellent fish that you don't see at our meetings. After this meeting you'll want to join their club too!! Here's the meeting location:

### Prince of Peace Church 3355 Medina Rd, (route 18 west of 71) Medina, OH 44256

Meeting time is the same as always.

# A Word from the President...

Lew Carbone, OCA President

Happy New Year! I hope that in 2016 you find success and fulfillment in your personal and family life as well as in your fishroom.

This time of year is always one of change, and for the OCA, more than usual.

Biggest change: Don Danko has stepped down from his long-time position as President of the OCA. Don has served 19 terms as president, 17 consecutively, meaning he has been president for about 60% of the time the OCA has existed! Luckily for me and the rest of the board, Don is staying on as an At Large member, and his experience and wisdom will be available to us as we go forward.

In other board changes, Gary Mendez is stepping up as our new Vice President and Andrew Shock has agreed to be our new Secretary. In addition, Scott Myers is taking over as Historian and we welcome Sherry Olszewski to the board as an At Large member. I am grateful for your confidence in me as President. I have an extremely hard act to follow.

Another change for the OCA is the date and venue of our January meeting. Because the 1st Friday is New Year's Day, and we didn't want to conflict with the Medina Aquarium Society on the 2nd Friday, I approached MCAS President Wayne Corman, and we worked out a plan for a combined meeting on January 8th. It will be held at the Prince of Peace Lutheran Church, on Rt. 18 just west of 171. Steve Heinbaugh, a member of both clubs, will be the speaker. Both clubs will still be having their bowl shows, and there will be a big, OCA-style raffle, with proceeds going to the MCAS. The auction will be run jointly, but auction registration is separate, with all items being "buck-a-bag", meaning the clubs keep only \$1 from each sale. BAP submissions can be made to only one club, so anyone wishing to submit the same species to both clubs must bring 2 bags.

There's one more change in store for the club, and it's another big one. Starting with the February 5th meeting, and, at least for 2016, we will be gathering at the Middleburg Heights Community Center. Details will be in next month's bulletin.

See you soon!

Lew

## A Word from the Editor...

Jon "Jombie" Dietrich, Buckeye Bulletin

Good afternoon!

A new year is upon us. With that, I sincerely hope your 2015 was one filled with successful fish keeping. In our lives, there are good years and bad. Our lives change so suddenly and so do our priorities, but it's my hope that you all keep fish keeping dear to your heart. Whether you have a hundred tanks or one, I encourage you to use the hobby as a means of happiness through all the commotion in the world. With little effort, your fish are always there for you. The hobby is always there for you. And with that, your club is always there for you. Reach out this year and become even more invested in something that will always give you a positive return. Take the time to grow out that desirable fish, enjoying each stage of life. Bring new life from it and spread it throughout our community. Learn about a topic of ichthyology that you've never known much about. Become an expert on a something and spread your knowledge by writing an article. Dive into the hobby even further this year and make it a turning point in your career. Make this year count. We're lucky to have such a strong community here. Take full advantage of it, and enjoy everything it has to offer.

THANK YOU to this month's contributors: Don Danko, Hilary Lacerda, and Carl Olszewski. I know readers will love your articles and pictures. They definitely make me want some new inhabitants downstairs!

Send me something this year - jdietric@mail.bw.edu

Stay fishy, Jombie

### January Program Preview Steve Heinbaugh

"Keeping and Breeding Corydoras"

The guest speaker for this month's joint Ohio Cichlid Association/Medina County Aquarium Society meeting, Steve Heinbaugh, isn't really a "guest" at all; he's a member of the OCA Board.

Steve was born and grew up in the Greater Cleveland area. He attended Mount Union College,

majoring in Music Education. Steve and his wife, Colleen, have two children, and live in Massillon. He worked for 10 years in the retail side of the pet industry, and is currently a purchasing agent for Coastal Pet Products, in Alliance.

Steve describes the course of his hobby:

My family always had an aquarium while I was growing up. My dad says he sat me down in front of the tank when I was a baby to calm me down. In elementary school, I remember watching black mollies being born. My mom was chasing them around the tank with a net to separate them so they would not get eaten. In college I learned about African Cichlids, and got my first Malawi cichlids for my tank at the fraternity house. After I graduated one tank turned into two, into six, into a dozen..... I started to really get into the hobby in the early 2000s. I had a tank of Malawi Mbuna and spent much time on various forums learning all about them. I learned more about Tanganyikans, and the first fish I got specifically for breeding was Neolamprologus brichardi. As my fish room grew, I started to branch out a little more. Central American cichlids were my new favorite and I had quite a fondness for Thorichthys and some of the other smaller cichlids. I had always been interested in Apistogramma and other dwarf South Americans, but they were hard to find. After starting to meet a lot of people and travel to conventions around the region, I found different fish and tried new things. Now I have been in my longest period with a "type" of fish, Corydoras and dwarf cichlids from South America and West Africa. Corys are now my main focus, and I have spawned 24 species of them in the past 5 years.

I have 55 tanks, ranging from 5.5 gal to 75. I currently have about 25 species of Corydoras, about 10 pleco species, some Apistogramma, and 6 West African dwarf cichlids.

Steve was the OCA Secretary from 2009 through 2015, and has been the Catfish BAP Chair since 2013.

The title of Steve's talk is "Keeping and Breeding Corydoras".

Please remember that the meeting will be held at the Prince of Peace Lutheran Church, Rt 18 (just east of I71) in Medina.

**Next month:** Ron Oldfield, of Case-Western University, will talk about Herichthys that have been introduced into the US. This will be our first meeting at our new location, Middleburg Hts. Community Center.

# Bowl Show – January 2015

Listed below is information about the monthly meeting Bowl Show. The Bowl Show is your opportunity to show off your fish. Each month different categories of Cichlids and Catfish will be judged. Points will be given and prizes will be awarded. All members are welcome to participate. This is great practice for our yearly Extravaganza show! See Carl Olszewski, OCA Board, at a meeting or contact him at carlolszewski@yahoo.com for more information.

It's a New Year here at the OCA and that means a new Bowl Show Competition. We had some great fish come in and I know for a fact that there's more great fish out there. SO BRING THEM IN! WE ALL WANT TO SEE YOUR FISH!

With that being said, the OCA wants to congratulate  $Scott\ Myers$ 

for winning the 2015 OCA BOWL SHOW GRAND PRIZE a complete 55 gallon set up.

Congratulations Scott, well done!

This month's Bowl Show Categories

Thank you to ALL our Extravaganza 2015 Show Participants!

We hope to see you next year!

## Jim Smith Donations Extravaganza 2015

The Ohio Cichlid Association's Jim Smith Endowment Fund is dedicated to supporting those who do work furthering cichlid research, education or conservation.

Each Extravaganza, the OCA accepts proposals for cichlidrelated projects. This year we receive many worthy proposals. After long thought and discussion, the OCA Board decided to give two donations this year.

Melanie Stiassny, of the American Museum of Natural History, in New York, received a \$1200 grant from the Jim Smith Fund, at the 2015 Extravaganza. On her next expedition to the Congo River, she will use the money to fund attempts to collect live Teleogramma obamaorum, a species she recently described from a single preserved specimen. Accepting the award for Dr. Stiassny is her colleague, Ad Konings.

## Jim Smith Donations Extravaganza 2015

The Ohio Cichlid Association's Jim Smith Endowment Fund is dedicated to supporting those who do work furthering cichlid research, education or conservation.

Each Extravaganza, the OCA accepts proposals for cichlidrelated projects. This year we receive many worthy proposals. After long thought and discussion, the OCA Board decided to give two donations this year.

Sam Borstein, of The University of Tennessee, received a \$2000 grant from the Jim Smith Fund at the 2015 Extravaganza. Sam is studying mbuna to find out how different species utilize the same areas of the algae cover in different ways. He will use the money to buy components for equipment that will use highspeed videography to record feeding mechanics while simultaneously measuring bite pressure. Long-time friend of the Borstein family, Phil Clary, accepts the award for Sam.

## Ways to Expand Your Hobby...

There are so many ways to enjoy the hobby.

Art can be an interesting vehicle to take it to the next level. Photography is the most common path taken by hobbyists. Many start by taking photos on their cell phones and eventually move to digital cameras. With the technology readily available to the average user, we are able to take fantastic pictures of our beautiful cichlids. Taking photos are a great way to log growth, keep track of inhabitants, create better sales ads, decorate your house, and more. As we saw at the Extravaganza 2015, aquatic photography is growing in our club. We did see other awesome examples of cichlid art too. Canvas paintings and wood burning pieces were submitted. These are great examples of how members are expanding their favorite hobby through art.

Cichlids are naturally a work of art. Creating a masterpiece should be easy. Be creative, patience, and ENJOY!

#### THE LARGEST SELECTION OF PREMIUM AFRICAN CICHLIDS IN OHIO!

WE SPECIALIZE IN AFRICAN CICHLIDS AND OTHER FRESH WATER FISH AND CATFISH. WE STOCK OVER 10,000 PRODUCTS AND OVER 22,000 GALLONS OF TROPICAL FISH AND LIVE PLANTS!

THURSDAY & FRIDAY 12:00 - 8:00 SATURDAY & SUNDAY 12:00 - 5:00

### Keeping and Breeding the Malawi Trout Cichlid By Don Danko 12-27-2015

Champsochromis caeruleus, the Malawi Trout Cichlid, is a very attractive fish from Lake Malawi. It is a large but peaceful fish that can be maintained with other fishes larger than they can swallow. Males become a rich blue color with a reddish anal fin and also grow attractive extensions to the unpaired fins. These traits make them very attractive in display aquariums.

In the wild, Champsochromis caeruleus is said to have a lake wide distribution. It is said to feed heavily on the Malawi sardine, Engraulicypris sardella. It inhabits open waters where its streamlined, torpedo shape is well suited to navigate this environment. It is sometimes seen over rocky habitats, but is most often seen over sand in shallow water (Konings 2015).

I was fortunate enough to buy a young adult group consisting of one male and three females earlier this year from a breeder in the Cincinnati area. The male was about 9-10" in length and the females were about 7-8". They transported well back to Cleveland and adapted to their new home quite well. They were initially housed in a 125 gallon, but later moved to a 100 gallon with an unusual selection of tankmates, six young adult Uaru amphiacanthoides! While that combination may strike you as odd, it has worked out quite successfully. The group was quite skittish in the 125 gallon and moving them in with the Uaru settled them down nicely. There is virtually no aggression and they routinely spawn. They've grown a bit and are now about 11-12" for the male and 8-9" for the females and they are still very compatible with the Uaru. The 100 gallon tank in which they are housed is bare bottomed with a 3" thick poret style sponge filter at one end of the tank that covers the entire cross section of the aquarium. It also has a couple of sponge filters at the other end. Clay flower pots are used for cover. This tank is connected to my automatic water change system that adds carbon filtered water twice daily.

Champsochromis caeruleus are aggressive feeders accepting a variety of foods. I frequently feed them freeze dried krill and periodically feed them floating food sticks, flakes and freeze dried mysis.

I was able to observe one spawning event in which the male and female staked out the right half of the 100 gallon tank as their territory. The pair swam along the bottom in a circular motion following each other while the female deposited large eggs and then subsequently picked them up into her mouth. C. caeruleus is a maternal mouthbrooder so only the female carries the eggs.

Initially, the females did not hold the eggs well, but that changed after the first couple of spawns. Now they hold the eggs and fry quite reliably. Spawn sizes have increased as the females have matured, from about 25 initially to about 80 currently. Being a maternal mouthbrooder, the females hold the eggs and fry for about 3 weeks or more and I have chosen to harvest the fry so that they will not be quickly consumed by the tank inhabitants when the female releases them. The fry are good sized when taken, close to 3/8" in total length. They grow quickly on feedings of decapsulated brine shrimp and crushed flake food. The fry reach 1" in length in just a few weeks.

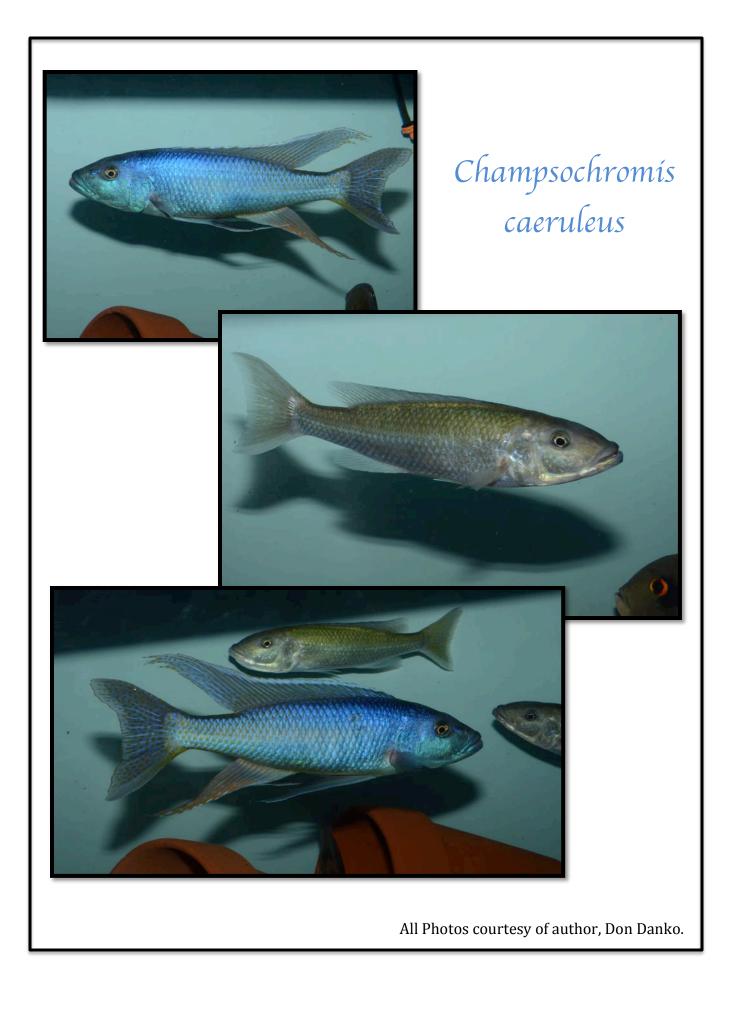

While I chose to pair them up with Uaru, more typical tankmates might be other Malawians like other good sized haplochromines. Just be sure that the tankmates are large enough not to be swallowed and also not too aggressive for the Trouts.

If you have a good sized tank available, think of giving the Malawi Trout Cichlid a try. The beauty of the male and the unique shape warrant devoting the tank space to them. Additionally, the fish is commercially attractive and selling some fry should help offset costs in the fishroom.

# THANK YOU Don Danko!

At the December 2015 meeting, Don Danko stepped down from his long-time position as President of the OCA. Don has served 19 terms as president, 17 consecutively, meaning he has been president for about 60% of the time the OCA has existed!

Don is staying on as an At Large member, and his experience and wisdom will be available to us as we go forward.

THANK YOU for your enormous contribution of time, energy, knowledge, experience, and passion.

# **Tomocichla sieboldii** By Hilary Lacerda

T. sieboldii are native to the Pacific slopes of Costa Rica and Panama, living in both flowing and stagnant water tolerating a wide range of pH and hardness. They are predominantly vegetarian in the wild eating grasses and algae as well as insects and freshwater shrimp. (Staeck, W. and Linke, H. American Cichlids 2: Large Cichlids, Tetra Verlag 1985).

I bought Dan Woodland's BAP F1 Tomocichla sieboldii Rio Gariche, Panama fry at the May 2014 OCA meeting and raised them to 4" & 6", at which point 2 of them colored up and began to be extremely territorial, this was July 4 2015. I was sure they had spawned but no fry ever appeared. After a week or 2 the male returned to his usual color pattern but the female stayed with the stark white and dark gray pattern with the stripes across her nose and continued to act broody for months. None of the others attempted spawning and I had decided she was having a dampening effect on them and was about to take her out of the 125 gallon tank, when to my great surprise on October 31 she appeared with new fry almost 4 months later. She and the male defended their half of the tank ferociously and had driven the other 6 sieboldi into the opposite corners. I put a divider made of a light diffuser grid across the middle of the tank and peace ensued. I siphoned off half the fry to raise separately just in case but the parents have been very good at protecting their fry and they are now about 3/4" in both tanks. They have been fed baby brine shrimp, microworms and crushed flake.

The OCA Bulletin Staff is looking for articles to be published in the February issue. Take the plunge and write your first article. Snap a few photos, and you're all set!

Submit articles to jdietric@mail.bw.edu

Reserve your spot in every issue of next year's bulletin by contributing \$100 in sponsorship at the 2016 Extravaganza!

## This Month in OCA History

Lew Carbone, OCA President

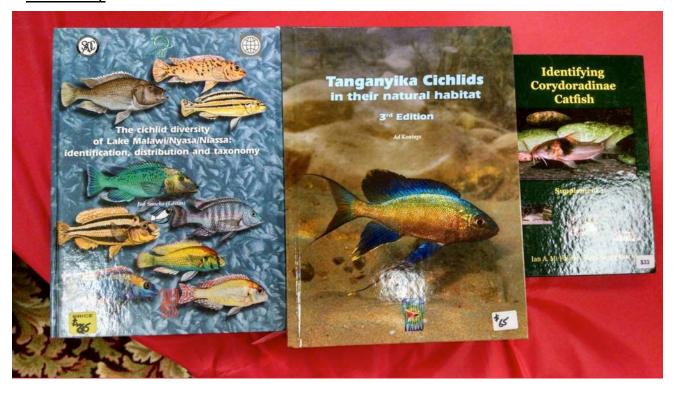

**1993:** Because the OCA's regular meeting date falls on New Year's Day, the club will be holding the January meeting on the 8th, in conjunction with the Medina County Aquarium Society, at the Prince of Peace Lutheran Church. At the event, each club holds its own BAP, Bowl Show and auction registration, but the auction is run jointly. MCAS will hold the raffle, but OCA members with losing tickets can bring them to the February meeting for a special "Losers" raffle.

**2003:** A full-color electronic version of the **BCLB** is first published. For those who wish to continue to receive the paper version, yearly dues are increased from \$15 to \$20. The electronic bulletin is attached to an email and sent to all members who have email addresses on file with the OCA.

**2005:** Well-known Canadian hobbyist Spencer Jack speaks about Cyphotilapia frontosa at the social meeting. Spencer discusses the splitting of frontosa into several species: C. frontosa, C. gibberosa and C. "North". *Debate about whether Cyphotilapia contains one or several species continues to this day.* 

### Library Report

We have some new books for the library. I want to thank Mike Schadle for donating the newest Ad Konings book: <u>Tanganyikan Cichlids in Their Natural</u> <u>Habitat</u> 3<sup>rd</sup> Edition. Mike also gave us some great deals on 2 other books: Ian Fullers supplement 1 to <u>Identifying Corydoradinae Catfish</u> and Joseph Snoeks' <u>The</u> <u>Cichlid Diversity of Lake Malawi/Nyasa/Niassa: Identification, distribution and</u> Taxonomy.

Thanks to Amazonas for sending us their wonderful new magazine and to Cichlid News for their continued support. We have a complete collection of Cichlid News, which has been indexed by Juan Miguel Artigas Azas in the Cichlid Room Companion.

Thanks to Jonathan Strazinsky, our videographer, who has been recording many of our speakers, he is working now on making copies of the DVD collection.

Members can check out 2 items and return them at the next meeting.

Thanks to all of you for your support and your patronage.

Hilary Lacerda

## Exchange Article

"The Fish Speak: Neolamprologus brevis/Brevis Sunspot" by Gord Mitchell (The Provider) From the newsletter of the Brant Aquarium Society Aquarticles.com

Hi my name is Ben Brevis and this is my mate Brenda. As mentioned above we are Neolamprologus brevis, also known by our friends as Brevis Sunspots.

Now a bit about our family if I may. Our ancestors emigrated originally from Lake Tanganyika, Africa, but for many years now my parents and theirs have lived here in North America. In Lake Tanganyika our breed usually inhabits the muddy and sandy areas of the lake where you will find a large number of snails. We are shell dwellers you see, and will often be found inhabiting the empty houses of these snails where we will spawn and hide from predators. Normally we can be found in water depths of 6 to 55 meters. Within our breed it is difficult to tell the males from the females but if you look real close you will notice that the males are usually larger and have a clearly pronounced orange fringe on the upper edge of the dorsal fin. You will not find a great many plants growing where our brother cichlids live but we, the Brevis, do like some small plants in our breeding environment.

I would like to touch upon a delicate subject here if I may. When Brenda is ready for spawning she nudges me in the side and then disappears into a shell with only her tail fin showing. Next I follow her in and position myself over the eggs that she has laid in the shell, and fertilize them while I shiver. No I'm not cold, it's just the way it happens. We usually have from 15 to 30 eggs, but I am not allowed to remain as Brenda will chase me out of the maternity ward shell while she takes very good care of our soon to be family. In about six days the youngsters are free swimming and I get to swim and frolic with them as we explore our environment. Now let me tell you a bit about our specific environment. We have a very good Landlord who has provided us with a five gallon aquarium to live in. It has a glass top and the bottom is covered with approximately 1.5 to 2 inches of silica sand and has several mixed size, live plants growing in it. We have our main bungalow shell, and two or three other guest shells which we can visit or which the children can play in when they're ready. Of course when they grow up they will have the use of these guest bungalow shells for their own accommodations and spawning.

We have a corner filter back there in the corner with lots of aeration bubbling out of it and enjoy a ten percent or more water change each week. At the price of heating these days I am pleased to say that our Provider keeps our accommodations at a temperature of 23.5 to 27.5 degrees Celsius without any cost to us. We have incandescent lighting that gives us sufficient illumination when outside our shell accommodations.

Food, oh yes. Well, our Provider feeds us twice a day with a variety of flake food and mixed fry food in the morning and something more substantial each evening. Our diet for our evening meals consists of one of the following: frozen beef heart, frozen shrimp, frozen blood worm, freeze-dried blood worm, freeze-dried tubifex worms, mosquito larva, plankton, krill, pellets, gamarus and each week after our water change we are fed live baby brine shrimp - boy do they hit the spot. We even get some fry food for our youngsters when necessary. You may think that this is a very rich diet and maybe you're right, but our Provider seems to enjoy what he is doing for us, so we show him our appreciation by growing fat and saucy and raising lots of young ones for him. Initially we had a great many small sand snails living in here with us but the Provider and his Lady took exception to their proliferation and cleaned them out. Now there aren't any left and I'm not sure if that might affect our breeding cycle. You see we have had four spawnings in a row while they were here.

Well I must go now; Brenda has just called me to look after the youngsters while she goes for a swim. Take care now and have a good day.

Ben, Brenda and the Brevis family.

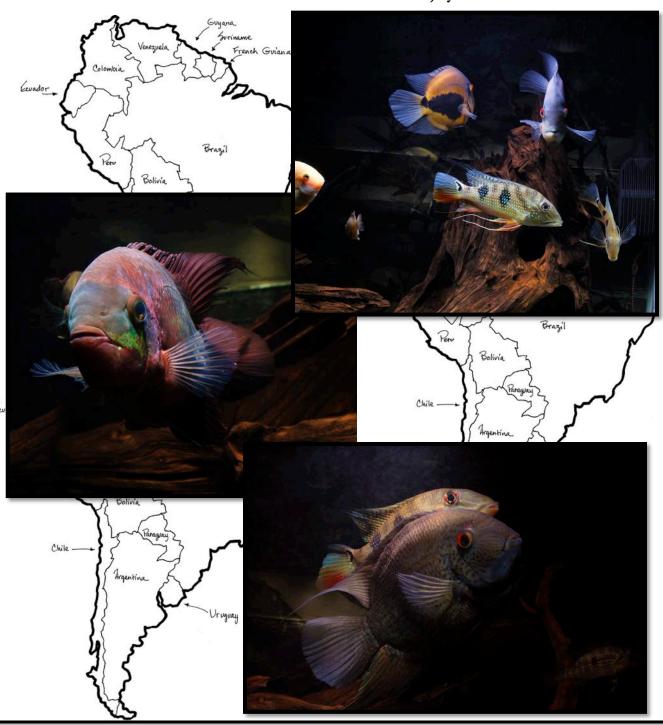

A Special Thanks to Gord Mitchell and Aquarticles.com

## Publish... Share... Learn

# Seriously South American

Carl Olszewski has two passions: South American aquatic inhabitants and photography. Lucky for us, Carl mixes those two hobbies, allowing us to have a front-row, high-def. view into some of the most beautiful South American fish. In this monthly installment, Carl graciously shares some of his best shots from the month. Enjoy!

# Membership Reminder...

Membership dues are important in maintaining the quality of the club. OCA membership dues are cycled yearly beginning and ending in November. Dues are currently \$15 for one year or \$25 for two years.

There are three ways to sign up!

- I. Sign up through the OCA website, Ohiocichlid.com, and pay with PayPal,
- 2. Email <u>OCAmember@gmail.com</u>
- 3. See Hilary Lacerda at a monthly meeting

If you know someone on the fence about the whole "club scene," bring that someone to a monthly meeting or auction and let him/her have an OCA experience. We are confident the environment will *book* that person into taking the next step into the hobby. The OCA thrives on its membership and we look for all the possible opportunities to make membership worth your time and money.

We do it all for YOU!

If you have any questions about membership, please direct them to Hilary Lacerda, OCA Board.

A family of products committed to developing technologies and innovative solutions for pet owners and their pets.

Brands you know. Brands you trust.

Bringing the ocean home.

# What's Important?...

SHARPIES!

These markers are MUST HAVE in the fish hobby. Here's how you can use them:

- Displaying information on bagged fish for auction
- Writing newly acquired species names on tanks before you forget
- Mark your styros, so they don't walk off
- Draw mustaches on your friends at 3AM during Extravaganza
- Carry it around on your collar for emergency

   Jonathan displays this one below!
